- Q&A

# Overview

- Give users option to ask for new access
  - Process split into multiple steps
- Improved user interface
- More configuration possibilities
- Configuration can be combined via archetypes
- Plays well with approvals and SoD

The screenshot shows the midPoint web interface. On the left, there's a sidebar with navigation links: SELF SERVICE (Home, Profile, Credentials), ADMINISTRATION (Dashboards, Users, Org. structure, Roles, Services, Resources, Cases, Certification, Server tasks, Nodes), and a central 'Request access' button. The main content area has a title 'Request access'. It features a dropdown menu for 'All roles' with options: All organizations, All services, and Roles of teammate. Below this are several configuration archetypes represented as cards:

- addressbook:contact**: Provision contact information to the adressbook. Buttons: Add to cart, Details.
- addressbook:patron**: Provision contact information to the adressbook for Patron o... Buttons: Add to cart, Details.
- addressbook:philistine**: Provision contact information to the adressbook for Philistines Buttons: Add to cart, Details.
- library:access**: Access to engineering library. Buttons: Add to cart, Details.
- scienceHub:basic**: Science hub users with basic access. Limited to 5 licenses (active users). Buttons: Add to cart, Details.
- scienceHub:premium**: Science hub users with premium access. Limited to 2 licenses (active users). Buttons: Add to cart, Details.

# Demo

## Tips & Tricks

- Disable unused options/features
  - Unnecessary steps will be hidden
- Make sure to implement proper autocomplete configuration
  - Persons of interest (groups)
  - Role of team-mate
- Don't use more than 3-4 levels of role hierarchy (UX)

## Distant Future

- Request for others than users - typically when someone is requesting for the "All people from the team" it should be rather inducement for "team" than a assignment per user
- Possibility to add attachment
- Better configurability to "Role preview details" – tile/table configuration and popup to display role details, e.g. approvers, role inducements, etc.
- Small improvements
  - Shopping cart (last step) - how do I know which users am I requesting for?
  - Save filters

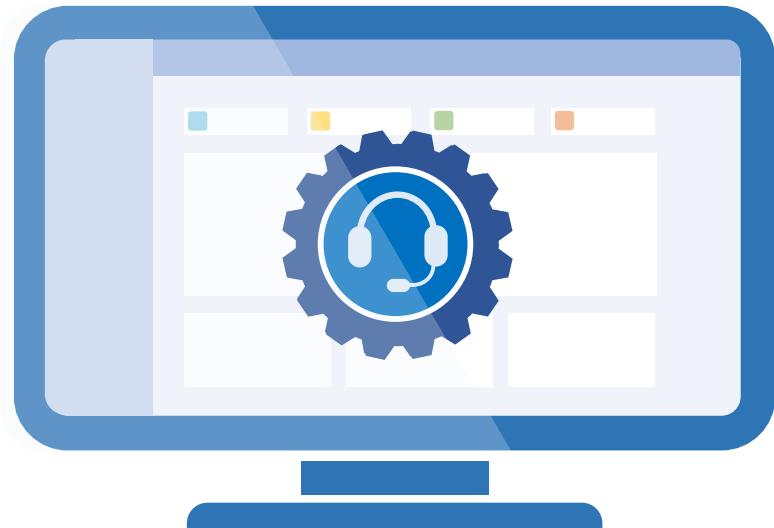

# Conclusion

- Request access wizard UI/UX improved
- Ask for myself or multiple users
- All steps fully configurable
- Checks for conflicts
